Before you start: sign in to squad.sourcy.ai and Google with your work accounts. **SR** means sourcing request. Keep Squad and its linked sheet in separate tabs.

Screenshots are examples; your products and prices will differ.
Production guide · 22 September 2026

SCENARIO 1

I already have an SR

Use the products already in Squad.

Step 1 Open Squad → Requests. Open the correct SR, then its **Products** area.

Step 2 Find **Work in Google Sheets**. Click **Review in Google Sheet**.

Step 3 Wait for **Workbook ready**. Click **Open Google Sheet**. If that link is already there, use it.

Look for Review in Google Sheet on the right.

You're done when: your linked sheet opens. Continue with Scenario 3.

Got a supplier file instead? If this SR has no workbook yet, use **Upload vendor documents** here. Wait for Workbook ready, then open it. An existing workbook cannot take another upload from this panel.

SCENARIO 2

I have a supplier price list

Create a new SR from a file.

- Step 1**
- In Squad, open the **new-request** page. Click **Upload vendor documents** and choose the supplier's file.
- Step 2**
- Wait for extraction. Open **Review extracted rows and anomalies**; compare names, quantities, prices and currencies with the file.
- Step 3**
- Choose the customer, contact, delivery address and owner. Complete any fields listed beside **Create SR**, then click it.
- Step 4**
- Open the created SR. Wait for **Workbook ready** → **Open Google Sheet**. Correct product details in the sheet.

S-Quad · Growth

Create a sourcing request

Work in Google Sheets

Edit your products in Google Sheets, check the prices, then create your quote.

Documents extracted. Check the products, then create the SR.

supplier-price-list.csv

1 product rows extracted. Prices and evidence are retained in their original currency.

▼ Review extracted rows and anomalies

Kind	SKU / description	Qty	Price
product	P01 Canvas pouch	100	10 USD

Open SR-example

Start another vendor import

Check the extracted products before creating the SR.

Files: PDF, images, CSV, TXT or XLSX. Up to 5 files; 10 MB each; 25 MB combined.

You're done when: the new SR has a linked sheet. Continue with Scenario 3.

This upload path does not start automatic sourcing or supplier messages.

SCENARIO 3

I want to edit and choose products

Your everyday workspace is the Products tab.

- Step 1**
- Check **Product name**, **Notes / selling points**, **Quantity**, **Supplier unit price** and **Supplier currency**.
- Step 2**
- Enter numbers only: quantity **100**, price **10**, currency **USD**. The price is for **one unit**.
- Step 3**
- Scroll right to **Packing basis**. Choose **Single** or **Carton**; fill the matching measurements below when delivery needs them.
- Step 4**
- Tick **Add to quote** for wanted products. Untick unwanted products; keep their rows.

B	C	D	E	F	G	H	I
Product name	Notes / selling points	Carton dimensions (cm)	Product dimensions (cm)	Add to quote	Quantity	Supplier unit price	Supplier currency
400ml insulated travel tumbler	301–400ml portable travel tumbler with lid 304 stainless steel with double-wall insulation Silicone sealing ring; custom logo and gift box unconfirmed		8 × 8 × 20	☒	2	1.53	USD

Products tab: edit the supplier inputs, then tick Add to quote.

Single

Product dimensions (cm)
+ Single weight (kg)

OR

Carton

Carton dimensions (cm)
+ Carton weight (kg)
+ Pieces per carton

Dimensions: **40 × 30 × 20** means length × width × height, in centimetres. Fill the chosen packing basis, not both.

You're done when: the correct products are ticked. Set pricing in Scenario 4.

SCENARIO 4

I want to change the customer price

Use the green cells under Quote pricing. Scroll right to find them.

Step 1

Choose **Quote currency**: the currency the customer will pay in.

Step 2

Set **Product markup (%)**. This applies across the sheet.

Step 3

Enter **Tax**, **Additional fees** and **Additional discount** as amounts—not percentages. Use **0** when none apply.

Step 4

Check **Customer total**. Return to Squad and click **Update from Google Sheet**; recheck the refreshed total.

Quote pricing	Value
Quote currency	USD
Product markup	15
Tax	0
Additional fees	0
Additional discount	0
Exclude delivery	☐
Selected products	3.52
Source fees	0
Catalog discount	0
Customer total	3.52
Before quoting	Checked rows sync and validate automatically. Fees are entered in the selected currency.
FX snapshot	USD: 2026-09-18 · CNY: 2026-09-17 · PHP: 2026-09-17 · SGD: 2026-09-17 · EUR: 2026-09-17

Green cells = your pricing inputs. Customer total = the result.

Exclude delivery: tick only for a products-only quote with no delivery charges. Shipping method and destination are reviewed in Squad.

Simple example

USD 10 + 20% markup = USD 12 per unit.

100 units → **USD 1,200**

Assumes no delivery, extra costs, tax or discounts. Markup is not profit margin.

You're done when: the updated total is correct. Next, check Ready.

Changing customer currency does not change the supplier's currency. Recheck tax, fees and discount amounts after changing currency. Leave calculated prices and conversion rates alone.

SCENARIO 5

A product says “Needs attention”

Read the message beside that product.

▶AB	AC	AD	AE	AF	AG	AH
Packing basis	Single weight (kg)	Pieces per carton	Carton weight (kg)	Lead time (days)	Review status	Review errors
Single ▼	0.25				Ready	

Scroll right: packing fields → Review status → Review errors.

- Step 1** Find the row’s **Review errors**. Fill or correct exactly what it asks for.
- Step 2** Return to Squad → **Update from Google Sheet**. Return to the sheet and check again.
- Step 3** Repeat until **every ticked product** says **Ready**. If asked to explain a specification difference, open that product’s review in Squad.

Draft	Needs attention	Ready
Not selected for the quote.	Fix the listed fields.	Selected row passed checks.

Changes normally update automatically after a short wait. The button checks them now. You do not need a second product-by-product validation for Ready sheet rows.

You’re done when: all ticked rows are Ready. Follow Scenario 7.

SCENARIO 6

I need a sample quotation

Optional: use sample prices and sample quantities.

- Step 1** In the **Products** sheet, fill **Sample fee**, **Sample currency** and **Sample details** for the wanted products.
- Step 2** Tick those products. In Squad, click **Update from Google Sheet**, then in the SR's **Products** area set **Quotation stage** → **Sample**.
- Step 3** Click **Create quotation**. In **Sample details**, set **Sample quantity (pieces)** and review sample terms and packing.
- Step 4** Update from the sheet again. Review the sample prices and totals, then follow Scenario 7.

J	K	L
Sample fee	Sample currency	Sample details
	USD	
These three columns hold the supplier's sample information.		

Important: the sheet's normal Quantity column is not the sample quantity. Set sample quantity in Squad. A sample fee is not automatically added to a bulk quote.

You're done when: the preview shows the correct sample quantities and prices.

SCENARIO 7

I'm ready to create the quotation

Finish in Squad, after the sheet is checked.

Work in Google Sheets

Edit your products in Google Sheets, check the prices, then create your quote.

Workbook ready

[Open Google Sheet](#) 

Your sheet edits are checked and saved to Squad automatically. Use "Update from Google Sheet" to check them now.

[Update from Google Sheet](#)

Last checked: 2:30:00 PM · No pending cell changes. Changes sync automatically; this count shows edits still waiting to sync.

Use Update from Google Sheet before creating the quotation.

- Step 1** Click **Update from Google Sheet**. Resolve any errors; confirm all ticked rows are **Ready**.
- Step 2** Click **Create quotation** on the SR. Check the quotation type and intended products.
- Step 3** Review **Shipping → Margins → Terms → Customer preview**. Check customer, quantities, currency, delivery and final total.
- Step 4** When approved, click **Publish quotation → Publish without sending → confirm Publish quotation**. Download or send through your usual process.

You're done when: the published quotation matches your reviewed numbers.

Publishing does not automatically send the quote in the current production release. If you change the sheet again, update and recheck before publishing.

SCENARIO 8

My sheet has the older layout

Only if you see Enable pricing in Google Sheet.

- Step 1** In Squad, click **Refresh sheet changes**, then **Sync sheet changes**. Resolve any errors first.
- Step 2** Click **Enable pricing in Google Sheet**. Wait for the new workbook.
- Step 3** Use **Open Google Sheet** from Squad. Work in this new linked sheet; keep the old one as a reference.

Example SR · Canvas pouch

Work in Google Sheets
Edit your products in Google Sheets, check the prices, then create your quote.

Workbook ready

[Open Google Sheet](#) 

Tick "Add to quote" for the products you want, then sync your changes and validate them in Squad.

Enable pricing in Google Sheet

Sync existing edits first. Creates a pricing sheet from your current draft and keeps the original workbook.

Refresh sheet changes

Sync sheet changes

Last checked: 2:30:00 PM · No pending cell changes.

This button is only shown for older workbooks.

You're done when: the new sheet has Products, green pricing cells and review status. Follow Scenario 3.

Stuck? Start here.

WHAT YOU SEE	WHAT TO DO
Google says "No access"	Use your work Google account. Ask the team admin for access.
Your edits have not appeared	Wait for Google to save. Return to Squad → Update from Google Sheet.
A product is missing	Tick Add to quote. Update and check that the row says Ready.
A price is blank or shows an error	Check supplier price and currency. Update from the sheet to refresh rates; recheck the total.
The total changed after updating	Review the refreshed delivery, rates and fees before creating the quote.
Both Squad and Sheets changed	Agree the correct value with your teammate. Stop editing from two places, then reconcile and update.
Upload failed	Read the message. Use Retry saved intake. If submission already started, check Requests before creating again.

Three things to leave alone

- 1 Rows and column headings.** Untick unused products. Do not paste new rows or delete existing ones.
- 2 Calculated prices, rates and protected cells.** Change supplier inputs and green pricing cells instead.
- 3 The linked workbook.** Always open it from Squad. A separate copy will not update your SR.

Still stuck? Send your team admin the **SR number** and a screenshot of the error.

Scope checked against production main, 3fc48a9, on 22 September 2026. Squad screenshots show released components with example data. Google Sheets screenshots show an existing dev workbook, viewed without changing its cells. This guide does not cover features available only on dev.
